

Strategic Capital Investment and Launch Proposal: Elitez Integrated Command Center

Strategic Transformation and Value Creation Framework

The commercial security and manpower outsourcing landscape in Singapore is experiencing a profound structural transition.¹ This evolution is driven by acute, localized labor constraints and systemic regulatory changes.¹ The Ministry of Manpower’s Progressive Wage Model (PWM) has introduced aggressive salary mandates for outsourced personnel, with full-time security officers realizing a 60% increase in baseline wages in 2024, followed by compounding annual increments of at least 8.3% through 2028.¹ In this environment, the fully loaded monthly operating expenditure required to deploy a single security officer ranges from \$5,400 to \$7,700 SGD.¹ These cost pressures expose conventional, labor-heavy business models to significant margin compression, driving a structural necessity for technology-enabled services.¹

As a highly diversified regional provider of human capital, recruitment, and facilities management services, Elitez Group is uniquely positioned to execute a high-margin transformation.⁴ By transitioning from a pure-play labor provider to an asset-light, technology-enabled managed services enterprise, Elitez Group can insulate its core divisions from wage-driven inflation while unlocking scalable, recurring B2B revenue streams.⁴ The proposed Elitez Integrated Command Center is the technical foundation of this transition.⁴ This proposal outlines the strategic blueprint to establish a centralized command node, consolidate internal operations across seven business units, and launch a specialized, manless security service targeting the under-served Foreign Employee Dormitory sector ahead of the 2030 regulatory mandate.⁴

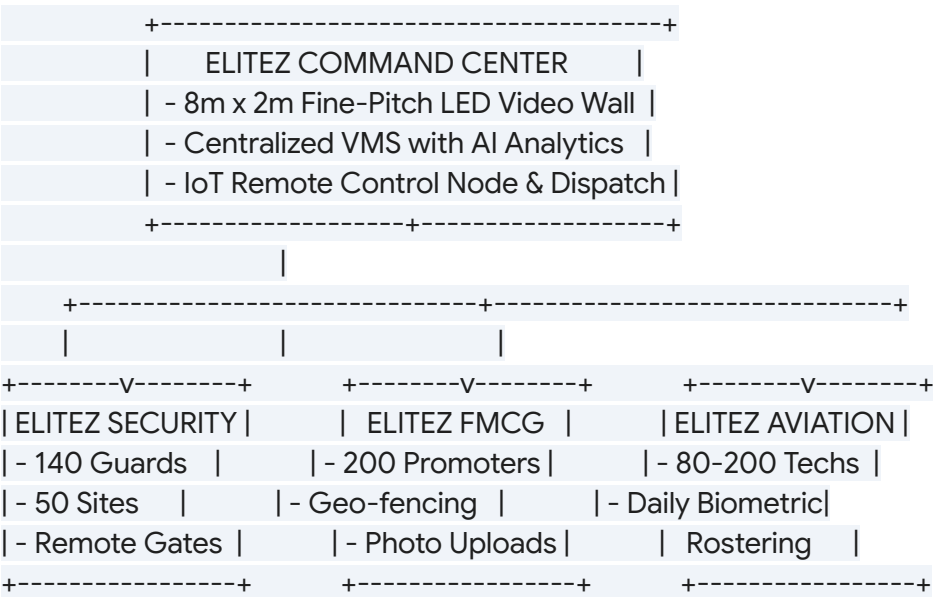

Business Unit / Department	Associated Brand Hex Code	Baseline Operational Metrics	Core Command Center Integration Mandates
Elitez Group HQ / Core HR ⁴	#D4AF37 (Gold)	9 regional offices across 5 SEA markets ⁴	Executive performance monitoring, unified SLA compliance, corporate

			governance oversight. ⁴
Elitez Security ⁴	#333333 (Charcoal)	140 full-time security guards across 50 active sites ⁴	24/7 video monitoring, remote access control, on-demand tactical guard dispatch. ⁴
MSF Safety Officers ⁴	#3498DB (Royal Blue)	Deployed across islandwide safety checkpoints ⁴	GPS geographical tracking, immediate hazard alert routing, AI-enabled automated safety report generation. ⁴
Elitez FMCG Ops ⁴	#E67E22 (Bold Orange)	Up to 200 promotional field staff ⁴	Geo-fenced biometric mobile attendance tracking, status verification, automated weekly report generation. ⁴
Service Delivery Ops ⁴	#1ABC9C (Active Teal)	150 to 250 personnel in high-density facilities ⁴	Visitor management flow monitoring, public enforcement dispatch coordination, hospitality roster integration. ⁴
AB Associates ⁴	#7F8C8D (Asphalt Grey)	100 industrial painters across 10-20 sites ⁴	Scaffolding safety compliance monitoring, work-at-height hazard detection, paint coverage progress recording. ⁴

Merchandising BU ⁴	#8E44AD (Royal Purple)	100 to 150 supermarket-deployed merchandisers ⁴	Shelf inventory visual audits, live competitor activity tracking, promotional material compliance. ⁴
Elitez Aviation ⁴	#2980B9 (Aero Blue)	80 technicians, scaling to 200 in 12 months under ALSS ⁴	Daily biometric shift-commencement rosters, MRO access verification, specialized credential auditing. ⁴

Technical Architecture and Infrastructure Specifications

The operational efficacy of the centralized command center depends on deploying highly scalable visual displays, optimal data compression profiles, and low-latency bi-directional IoT pipelines.⁴

Physical Display: Fine-Pitch LED Video Wall

Conventional LCD video walls introduce bezel lines that disrupt visual continuity during multi-feed surveillance operations.¹² The physical display will consist of a seamless, high-brightness indoor fine-pitch LED video wall measuring 8.0 meters in length by 2.0 meters in height.⁴ Utilizing a pixel pitch of $P1.2$ to $P1.5$, the video wall ensures sharp readability of dense textual dashboard interfaces and high-resolution camera feeds from a standard operator distance of 3 to 5 meters.¹³

The display configuration is powered by an advanced modular multi-channel video processor, enabling operators to dynamically partition the display into custom window arrays, prioritizing real-time emergency feeds as determined by AI-triggered alert conditions.¹²

Network Bandwidth and Storage Calculations

To support 200 concurrent incoming Full HD video feeds⁴, the network must utilize the High-Efficiency Video Coding (H.265/HEVC) compression standard, which achieves a 50% reduction in bitrate requirements compared to legacy H.264 formats.¹⁴ Under standard operating parameters, the calculations for network bandwidth and dual-tier data storage are modeled as follows:

Let:

- N be the total camera stream feeds (set to 200)⁴
- R_{high} be the bitrate per camera for a 1080p stream at 15 frames per second under typical activity (1.5 Mbps)¹⁴
- R_{mec} be the bitrate per camera transcoded to 720p at 10 frames per second for a medium-resolution archive (0.75 Mbps)¹⁶
- ω_{network} be the network protocol and packet transmission overhead coefficient (0.20)¹⁴
- ω_{system} be the RAID formatting, storage file system, and VMS metadata overhead coefficient (0.20)¹⁴
- T_{local} be the on-premise high-resolution retention phase (30 days)⁴
- T_{cloud} be the cloud-based medium-resolution archive phase (60 days)⁴

The Total Inbound Network Bandwidth (B_{total}) is calculated by:

$$B_{\text{total}} = N \times R_{\text{high}} \times (1 + \omega_{\text{network}})$$

Substituting the baseline values yields $B_{\text{total}} = 360.0 \text{ Mbps}$. To maintain stable, low-latency video streaming, Elitez Group will implement a dedicated enterprise-grade 1 Gbps fiber optic connection, ensuring network utilization remains below 40% under baseline loads.¹⁴

The Daily On-Premise Storage Consumption (S_{daily}) in megabytes per day is modeled by:

$$S_{\text{daily}} = N \times \left(\frac{R_{\text{high}} \times 86,400}{8} \right) \times (1 + \omega_{\text{system}})$$

This yields approximately 3.89 TB of daily data generation. For the high-resolution phase ($T_{\text{local}} = 30 \text{ days}$), the minimum usable on-premise storage capacity ($S_{\text{local_total}}$) is:

$$S_{\text{local_total}} = S_{\text{daily}} \times T_{\text{local}}$$

This totals 116.70 TB of high-resolution retention. This requires a local Network Attached Storage (NAS) chassis configured with RAID 6 (dual-drive parity) utilizing enterprise SAS drives.¹⁴ This provides continuous fault tolerance while maintaining a raw physical capacity of approximately 160 TB to satisfy storage system format overhead.¹⁴

At Day 31, video files are transcoded to a medium-resolution profile for cloud archiving.⁴ The Daily Cloud Storage Consumption ($S_{\text{cloud_daily}}$) in megabytes per day is:

$$S_{\text{cloud_daily}} = N \times \left(\frac{R_{\text{med}} \times 86,400}{8} \right) \times (1 + \omega_{\text{system}})$$

This yields approximately 1.94 TB of daily data generation at medium resolution. The Cloud Archive Capacity ($S_{\text{cloud_total}}$) required for the subsequent 60-day period is:

$$S_{\text{cloud_total}} = S_{\text{cloud_daily}} \times T_{\text{cloud}}$$

This totals 116.40 TB for the cloud archive.

System Variable / Parameter	Operational Configuration Values	Resulting Network and Storage Outputs
Total Ingest Feeds (N) ⁴	200 active IP cameras	N/A
Primary Video Codec ¹⁴	H.265 / HEVC	50% storage compression benefit ¹⁴

High-Resolution Stream (R_{high}) ¹⁴	1080p Full HD @ 15 fps	1.5 Mbps per active camera channel ¹⁴
Medium-Resolution Stream (R_{med}) ¹⁶	720p HD @ 10 fps	0.75 Mbps per active camera channel ¹⁶
Network Overhead (ω_{network}) ¹⁴	20% protocol buffer	N/A
System Storage Overhead (ω_{system}) ¹⁴	20% parity and formatting	N/A
Consolidated Live Bandwidth (B_{total})	200 incoming high-resolution feeds	360.0 Mbps constant incoming traffic ¹⁴
On-Premise NAS Storage ($S_{\text{local_total}}$)	Days 1 to 30 (high-resolution retention)	116.70 TB Usable (RAID 6 array) ¹⁴
Cloud Archive Storage ($S_{\text{cloud_total}}$)	Days 31 to 90 (transcoded archiving)	116.40 TB Usable (Object storage tier) ¹⁶

Custom AI Video Analytics and Automated Pop-Up Triggers

The central VMS platform will run parallel computer vision models configured specifically for the operational rules of each business unit:

- **Intrusion Detection and Line Crossing:** Monitors perimeters during non-operational hours, immediately flagging unauthorized crossings, popping up the specific feed on the LED video wall, and generating tactical dispatch alerts.⁵
- **Personal Protective Equipment (PPE) Compliance:** Continuously monitors high-risk industrial zones, detecting when safety helmets, high-visibility vests, or fall-protection harnesses are missing.¹⁰
- **Biometric and Gantry Exception Triggers:** Integrates with access control gantries, automatically flagging unrecognized faces, tailgating incidents, or individuals flagged on internal checklists.

IoT Integration and Remote Control Capability

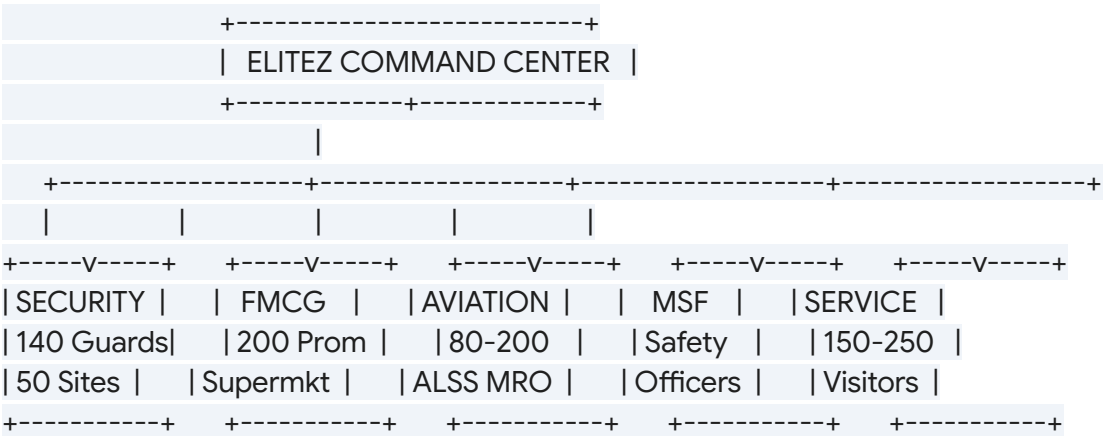

The command center is engineered as a bi-directional operations center, shifting from reactive

observation to active, remote control ⁵:

- **Egress Control:** Operators can remotely lock or unlock electromagnetic (EM) side doors, vehicle gantry gates, and main facility access points via secure IP relays.⁴
- **SIP Audio Integration:** Integrates with two-way IP video intercom kits, enabling operators to communicate with visitors, delivery personnel, and employees, granting access after identity verification.⁵
- **Tactical Response Dispatch:** Leverages geo-tracking within the unified mobile app to dynamically route the closest mobile patrol guard, safety check officer, or supervisor to any active site alarm.⁴
- **Robotic Guarding Systems Integration:** Designed to interface with autonomous patrol drones and robotic patrol dogs, executing remote path planning, receiving real-time telemetry, and triggering localized alarms.⁴

Cross-Business Unit Operations and Workflow Integration

The command center will consolidate and run the distinct field operations of Elitez Group's seven business units, maximizing capital efficiency across the entire group.⁴

1. Elitez Security (Hex Code: #333333)

- **Operational Context:** Currently deploys 140 full-time security guards managing physical protection and access control across 50 islandwide sites.⁴
- **Technical Integration:** The command center replaces labor-intensive security guard structures with remote, virtual guarding systems.⁵ Distributed IP cameras stream directly

to the centralized 8m x 2m LED display wall, while integrated IP relays provide remote control over electromagnetic (EM) side doors and vehicle gantry gates.⁴

- **Workflow Execution:** When a visitor arrives at a manless site, they activate a two-way SIP video intercom call.⁵ This call routes to the command center, displaying the visitor's image and credential dashboard on the video wall. The operator verifies the visitor's identity and issues an IP signal to release the EM door.⁴ If a perimeter breach occurs, an AI intrusion alarm pops up the live feed, prompting the operator to initiate audio challenges over localized IP speakers and dispatch the closest mobile guard using real-time GPS coordinates.⁴

2. MSF (Hex Code: #3498DB)

- **Operational Context:** Manages safety check officers deployed across islandwide industrial and commercial checkpoints to audit regulatory safety compliance.⁴
- **Technical Integration:** Integrates real-time GPS tracking on the safety check officers' mobile devices with an automated AI-driven report generation engine.⁴
- **Workflow Execution:** The command center's GIS mapping module tracks safety officer routes, verifying that checkpoints are completed on schedule. Upon detecting a safety hazard, the officer captures a photo and logs details in the mobile application. The command center's AI engine ingests these inputs, automatically formatting and compiling them with historical hazard metrics and regulatory clauses.⁴ This generates a compliant safety audit report that is transmitted to clients and regulatory authorities within minutes.⁴

3. FMCG Operations Team (Hex Code: #E67E22)

- **Operational Context:** Manages a large team of up to 200 in-store promoters deployed across supermarkets and retail centers islandwide.⁴
- **Technical Integration:** Geo-fenced biometric clock-in verification, real-time campaign status reporting, and automated weekly report generation.⁴
- **Workflow Execution:** Upon arriving at their assigned retail outlet, promoters clock in using the mobile app's facial recognition, which is cross-referenced with their device's GPS coordinates.⁴ If a promoter is late or fails to clock in, the command center triggers an automated reminder and alerts the scheduler. Promoters take photos of the product display and input sales metrics directly into the app.⁴ The command center automatically aggregates this data, compiling comprehensive weekly sales and campaign performance reports for FMCG brand managers.⁴

4. Service Delivery Operations Team (Hex Code: #1ABC9C)

- **Operational Context:** Directs high-volume, public-facing service teams comprising 150 to 250 employees.⁴ These teams manage hospital visitor queues, National Environment Agency (NEA) enforcement patrols, and luxury hotel service operations.⁴

- **Technical Integration:** Real-time workforce rostering, crowd-density video analytics, and incident-focused patrol dispatching.⁴
- **Workflow Execution:** For hospital visitor management, crowd-density camera analytics track visitor queues at registration points. If congestion rises above a pre-set threshold, the command center triggers an alert, prompting the on-site supervisor to deploy additional visitor management staff. For NEA enforcement, patrol teams are tracked via a GIS map, with command center operators routing officers to reported littering or smoking hotspots to improve enforcement coverage.

5. AB Associates (Hex Code: #7F8C8D)

- **Operational Context:** Deploys a team of 100 professional painters across 10 to 20 building and estate repainting projects throughout Singapore.⁴
- **Technical Integration:** High-resolution project progress capture, structural safety compliance tracking, and automated client status reporting.⁴
- **Workflow Execution:** Mobile cameras and on-site VSS streams monitor active painting sites.¹⁰ The command center's safety analytics scan scaffolding and cradle platforms, immediately flagging if an industrial painter is operating without a fall-arrest harness or helmet.¹⁰ Operators capture progress photos at scheduled intervals²⁰, compiling these visual assets with project timelines to generate weekly structural progress reports for building owners and property developers.⁴

6. Merchandising Business Unit (Hex Code: #8E44AD)

- **Operational Context:** Manages 100 to 150 full-time merchandisers deployed across supermarkets to optimize product visibility, manage stock returns, and direct in-store campaigns.⁴
- **Technical Integration:** Live shelf-share monitoring, real-time competitor tracking, and mobile POSM (Point-of-Sale Materials) audit reporting.⁴
- **Workflow Execution:** Merchandisers use their mobile devices to capture structured images of store shelves, documenting stock levels, shelf share, and competitor promotions.⁴ The command center processes these images, comparing them with established display guidelines. If errors are detected, the system alerts the on-site merchandiser to adjust product positioning.⁴ Merchandisers input competitor pricing and product launches, enabling the command center to generate live pricing dashboards. This data helps merchandisers negotiate with supermarket store managers for improved product placement and added shelf frontage.⁴

7. Elitez Aviation (Hex Code: #2980B9)

- **Operational Context:** A high-growth business unit deploying 80 technicians to Aerospace Maintenance, Repair, and Overhaul (MRO) hangars under the Aerospace Labour Supply Scheme (ALSS).⁴ Headcount is projected to grow to 200 within 12

months.⁴

- **Technical Integration:** Biometric nominal roll authentication, compliance tracking for specialized certifications, and daily shift attendance reporting.⁴
- **Workflow Execution:** High-security aviation MRO environments require verified attendance tracking.⁴ Elitez Aviation technicians must authenticate their shifts via facial recognition kiosks at hangar entry points.²¹ The command center compares these biometric scans with the scheduled shift rosters.²² If a technician is absent, the system alerts operations managers within 15 minutes of shift commencement. This allows stand-by personnel to be deployed quickly, preventing operational delays in aircraft hangars.

Specialized Commercial Launch Strategy: FCD Manless Security Services

The primary external commercial vector for Elitez Group to generate high-margin recurring revenue is launching a specialized, turn-key "Manless Security" service designed for Factory-Converted Dormitories (FCDs).⁴

Regulatory and Economic Market Drivers

Under the Foreign Employee Dormitories Act (FEDA), the Ministry of Manpower (MOM) requires all migrant worker dormitories housing seven or more residents to obtain a full operating license.³ The Dormitory Transition Scheme (DTS) mandates that approximately 1,000 existing FCDs and Purpose-Built Dormitories (PBDs) must retrofit their properties to meet improved standards by December 31, 2030.⁶

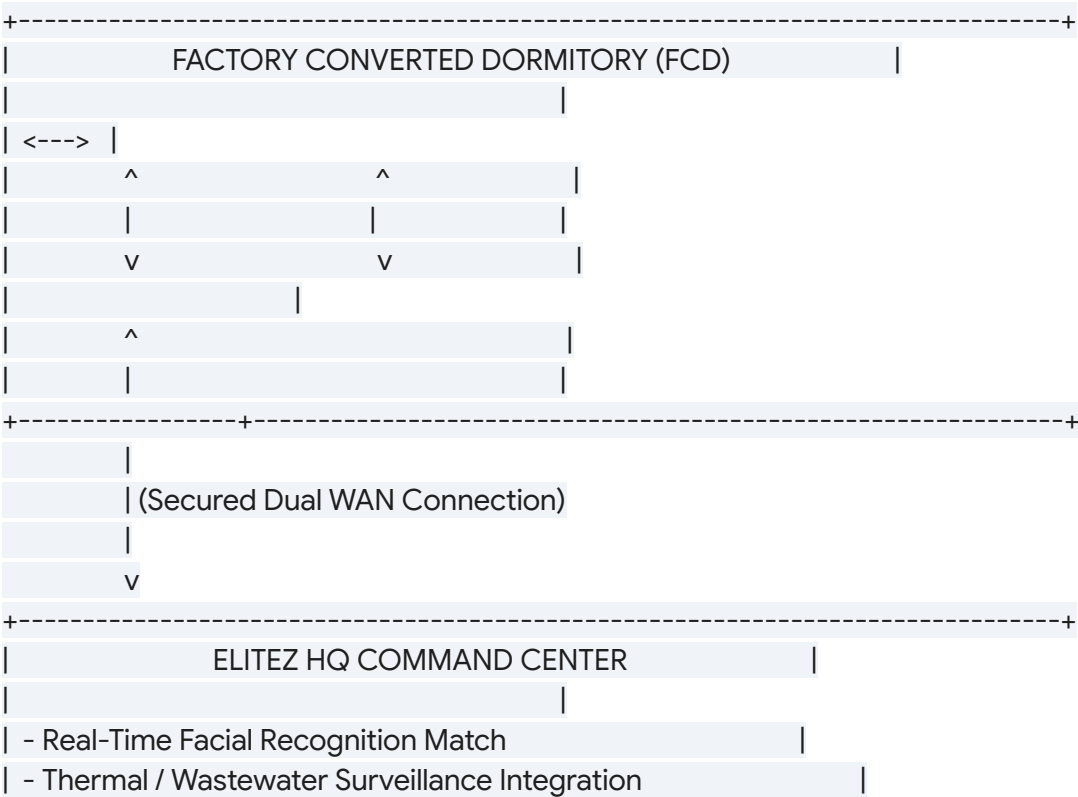

FEDA Licensing Classes	Beds Parameter	Required Operational Controls under FEDA and DTS
Class 1 Dormitories	7 to 99 beds	Basic spatial standards, general hygiene, standard perimeter security. ²³
Class 2 Dormitories	100 to 299 beds	Essential recreational spaces, public health outbreak plans, access control. ²³

Class 3 Dormitories	300 to 999 beds	Strict incident reporting times, robust internal security, nominal roll verification. ²³
Class 4 Dormitories	1,000 beds or more	Complex traffic management, isolation facilities, routine compliance audits. ²³

FCD operators are experiencing significant operational challenges.⁶ Implementing conventional security models requires a minimum of two security guards working rotating shifts, costing between \$12,800 and \$19,400 SGD per month.¹ This represents a heavy financial burden for smaller Class 1 and Class 2 FCDs.²³ The Elitez Manless Security solution addresses this market gap, enabling operators to achieve compliance with MOM standards at a lower cost.⁴

The FCD Manless Security Service Package

Elitez Group will deliver a comprehensive, technology-driven managed security service ¹:

- Remote Gate Strike & Two-Way SIP Audio Support	
- On-Demand Mobile Patrol Dispatch	
+-----+	

- **Biometric Facial Recognition Entry Gantries:** Elitez will install weather-proof turnstiles integrated with edge-AI facial recognition terminals.²¹ These systems authenticate residents entering and exiting the property in less than 0.5 seconds, satisfying FEDA requirements for real-time occupant logs.²¹
- **Contactless Health Screening Integration:** Gantries can integrate automated thermal scanning sensors, satisfying public health resilience requirements under the DTS framework.²² If an elevated temperature is detected, the gantry locks, preventing entry and routing an alert to the command center to coordinate isolation.²²
- **Virtual Guard House and Remote Intercom Support:** High-definition video intercom stations are connected directly to command center operators.⁵ Visitors and delivery personnel call the command center with one button, enabling operators to verify credentials and remotely unlock vehicle gantry gates or side doors.⁴
- **On-Demand Tactical Patrol Dispatch:** The FCD properties are integrated into the command center’s tactical dispatch network.⁴ If the VMS detects a security or safety incident (such as a perimeter breach or fire alarm), operators immediately dispatch the nearest mobile patrol guard to resolve the situation on-site.⁴
- **Command Center as a Service (CCaaS) for Guarding Agencies:** Elitez will white-label its command center capabilities to boutique security agencies.⁴ This allows smaller agencies to leverage Elitez’s infrastructure, providing them with compliant command center services without requiring significant upfront capital expenditure.

Financial Feasibility, CapEx Allocation, and Government Funding Optimization

Establishing this advanced command center requires an estimated capital expenditure (CapEx) of \$500,000 to \$700,000 SGD.⁴ This investment will be allocated across technical infrastructure and physical fit-out.

Capital Expenditure (CapEx) Allocation Budget

Technology Category	Hardware & Software Components	Estimated Cost (SGD)
Physical Display System	8.0m x 2.0m seamless indoor fine-pitch LED	\$90,000 - \$120,000

	display wall, professional modular video wall processor, and calibration systems. ⁴	
Storage & Server Rack Infrastructure	High-availability rack servers, 160 TB enterprise-grade NAS storage array, dual-WAN firewall routers, UPS power backups, and cabling. ¹⁴	\$80,000 - \$110,000
VMS & Enterprise AI Software	Centralized VMS platform licenses, custom computer vision AI analytics modules, and centralized operator management console software. ⁴	\$150,000 - \$190,000
IoT Integration Hardware	Biometric facial recognition terminals, turnstile kits, electromagnetic locks, IP-addressable relay modules, and IP SIP intercom units. ¹⁹	\$70,000 - \$100,000
Control Room Fit-Out	Ergonomic operator consoles, soundproofing paneling, dedicated back-up cooling systems, security access control doors, and structural framing.	\$60,000 - \$80,000
Unified Dashboards	Custom software integration, developer API integrations, and customized workforce tracking dashboards. ⁴	\$50,000 - \$70,000
Unforeseen	10% reserve for shipping cost fluctuations, localized	\$40,000 - \$60,000

Contingencies	on-site calibration challenges, and technical engineering adjustments.	
TOTAL INITIAL PROJECT CAPEX	Consolidated initial capital investment for full system launch	\$540,000 - \$730,000

Government Funding and Subsidy Optimization Strategy

To maximize financial viability, Elitez Group will leverage Singapore's business grants, co-funding up to 65% of the initial capital requirements ²⁷:

+-----+-----+-----+											
ELITEZ COMMAND CENTER CAPEX: S\$500k-700k											
+-----+-----+-----+											
+-----+-----+-----+											
+-----V-----+ +-----V-----+ +-----V-----+											
ESG EDG				WSG WDG(JR+)				WSG CCP			
- Up to 50%				- Up to S\$150k				- Up to 90%			
Co-funding				Consulting				Salary			
- Software &				Rebate				Subsidies			
Hardware				- Job Redesign				- Operator			
Reimbursement				Frameworks				Reskilling			
+-----+-----+-----+											

1. Enterprise Development Grant (EDG)

Administered by Enterprise Singapore, the EDG supports local enterprises in upgrading their capabilities, driving operational productivity, and adopting advanced technologies.²⁷ As a registered, financially viable entity with at least 30% local shareholding, Elitez Group meets the core eligibility requirements.²⁷

Under the **Innovation and Productivity** pillar, the EDG co-funds up to 50% of qualifying costs.²⁷ This funding applies directly to hardware servers, LED wall screens, VMS licenses, custom software development, and third-party implementation fees.³⁰

$$\text{EDG Projected Subsidy Benefit} = 0.50 \times \text{Qualifying CapEx}$$

Applying this formula to a qualifying CapEx of \$500,000 SGD yields a direct reimbursement of \$250,000 SGD.³⁰

Important Compliance Requirement: Elitez Group must secure the official Letter of Offer (LOO) from Enterprise Singapore before signing any vendor contracts, paying deposits, or commencing physical works, as retrospective claims are strictly prohibited.²⁷

2. SkillsFuture Workforce Development Grant (Job Redesign+)

Elitez Group holds pre-approved consultant status for Workforce Singapore's SkillsFuture Workforce Development Grant (Job Redesign+), valid through March 2027.²⁸ Under the WDG(JR+) framework, Elitez can leverage its own consulting expertise to redesign the job descriptions of its command center operators, security supervisors, and field managers.²⁸

This grant offers up to \$150,000 SGD in cumulative funding at a 70% support rate for SMEs, structured across three funded pathways²⁸:

- **Workforce Consultancy (Component 01):** Funded up to \$50,000 SGD to conduct business process mapping, AI technology readiness evaluations, and operational competency audits for the new command center.²⁸
- **Capability Building Initiatives (Component 02):** Funded up to \$60,000 SGD to place internal HR and training experts onsite, establishing career progression pathways and structured On-the-Job-Training (OJT) frameworks.²⁸
- **Workforce Tech Solutions (Component 03):** Funded up to \$90,000 SGD (when bundled with Component 1 or 2) to deploy workforce planning and skills gap diagnostic systems within the command center.²⁸

This yields a combined, optimized grant rebate of up to \$105,000 SGD.²⁸

3. WSG Career Conversion Programme (CCP) for Security Officers

To offset the ongoing operational expenditure (OpEx) of staffing the command center, Elitez will tap into the Career Conversion Programme for Security Officers, with the Singapore National Employers Federation (SNEF) acting as the appointed Programme Manager.³²

This program is designed to reskill existing Security Officers (SOs) or Senior Security Officers (SSOs) into advanced command center surveillance and IoT monitoring operators through structured, 1-to-2-month in-house OJT programs.³² The salary support funding is highly advantageous:

- **Standard Rate:** Up to 70% of the trainee's monthly basic salary for the training duration, capped at \$5,000 SGD per month.³²
- **Enhanced Rate:** Up to 90% of the trainee's monthly basic salary, capped at \$7,500 SGD per month, applicable to Singapore Citizens or Permanent Residents aged 40 years and

above.³²

Quantitative Financial Model and Return on Investment (ROI) Analysis

To evaluate the financial viability of establishing the Elitez Integrated Command Center, a detailed 3-year cash flow model has been established. This model demonstrates how front-loaded government grants, internal workforce optimization, and high-margin external "Manless Security" subscription services combine to generate an exceptional return on investment.

Capital Expenditure (CapEx) Net Cost Breakdown

Assuming a baseline gross CapEx of \$650,000 SGD (the midpoint of the targeted investment range), the net out-of-pocket setup cost for Elitez is significantly reduced through targeted co-funding grants:

Budget Item	Gross Cost (SGD)	Government Subsidy (SGD)	Net Cost to Elitez (SGD)	Funding Source & Reference
Command Center Core Infrastructure	\$200,000	\$100,000	\$100,000	ESG Enterprise Development Grant (EDG) ⁶
Unified Software, VMS, & AI Analytics	\$170,000	\$85,000	\$85,000	ESG Enterprise Development Grant (EDG) ⁶
Workforce Redesign & Tech Integration	\$150,000	\$105,000	\$45,000	WSG SkillsFuture WDG(JR+) ¹⁶
IoT Hardware & Site Enablement	\$80,000	\$40,000	\$40,000	ESG Enterprise Development Grant (EDG) ⁶
CC Reskilling Salary	\$50,000	\$45,000	\$5,000	WSG Career Conversion

Subsidies				Programme (CCP) ¹⁷
Consolidated Capital Investment	\$650,000	\$375,000	\$275,000	Consolidated Co-Funding Rate: 57.7%

Annual Recurring Benefit Model (Savings & Revenue)

The financial return is driven by two primary vectors: internal operating efficiency and external commercial growth.

1. Internal Operating Efficiencies (Manpower Optimization)

Elitez Security currently deploys 140 guards across 50 active physical sites.⁴ By transitioning just 8 of these sites to a hybrid manless/remote guarding model via the command center, Elitez can reduce its physical on-site guard count by 16 personnel.

- **Headcount Savings:** 16 physical guards.
- **Fully Loaded Headcount Cost:** Average of \$7,500 SGD per month per officer under the Progressive Wage Model (PWM), including basic wage, overtime, CPF, insurance, and recruitment amortization.¹
- **Gross Annual Savings:** \$1,440,000 SGD.
- **Command Center Incremental OpEx:** To support these sites, the command center incurs annual costs of \$466,000 SGD. This includes the salaries of 6 dedicated CC operators (\$396,000 SGD, reskilled via the SNEF CCP), enterprise VMS licensing (\$40,000 SGD), and cloud hosting (\$30,000 SGD).
- **Net Annual Internal Savings:** \$974,000 SGD.

2. External Commercial Revenue (FCD "Manless Security" SaaS)

Targeting the under-served Class 1 and Class 2 Factory-Converted Dormitories (FCDs) facing the DTS 2030 compliance deadline :

- **FCD Traditional Security Cost:** Up to \$19,400 SGD/month (for 2 rotating full-time guards).¹
- **Elitez "Manless Security" SaaS Subscription:** Priced at \$5,500 SGD/month (offering FCD operators over 60% in monthly cost savings while ensuring full MOM compliance).⁵
- **Year 1 Penetration Target:** 8 active FCD clients.
- **Gross SaaS Revenue:** \$528,000 SGD.
- **Year 1 Direct OpEx (Platform licenses, mobile dispatch patrol):** \$60,000 SGD.
- **Net FCD Revenue contribution:** \$468,000 SGD.

Return on Investment (ROI) Metrics and Projections

Let:

- C_{gross} be the gross initial capital expenditure (\$650,000 SGD)
- C_{net} be the net initial capital expenditure after government grants (\$275,000 SGD)
- S_{gov} be the total government subsidies and co-funding (\$375,000 SGD)
- B_{net} be the net annual recurring financial benefit (Year 1: \$1,442,000 SGD)

The capital cost and returns are modeled by:

$$C_{\text{net}} = C_{\text{gross}} - S_{\text{gov}}$$

$$\text{ROI}_{\text{Net}} = \left(\frac{B_{\text{net}}}{C_{\text{net}}} \right) \times 100$$

$$\text{Payback Period (Months)} = \left(\frac{C_{\text{net}}}{B_{\text{net}}} \right) \times 12$$

Substituting the baseline financial values yields the following performance metrics:

- **Year 1 Net Annual Recurring Benefit:** \$1,442,000 SGD (combining \$974,000 SGD in internal savings and \$468,000 SGD in FCD SaaS profits).
- **Gross Capital Return on Investment (Year 1):** 221.8% on gross investment.
- **Net Capital Return on Investment (Year 1):** 524.4% on out-of-pocket net investment.
- **Net Payback Period:** 2.3 months.

Three-Year Cash Flow Projection (SGD)

As external FCD client acquisition scales from 8 sites in Year 1 to 20 sites in Year 2 and 35 sites in Year 3, the financial returns compound rapidly:

Financial Period	Setup / Year 0	Year 1	Year 2	Year 3
Gross CapEx Outlay	(\$650,000)	\$0	\$0	\$0
Government Grants	\$375,000	\$0	\$0	\$0

Recouped				
Net CapEx Outlay	(\$275,000)	\$0	\$0	\$0
Internal Headcount Net Savings	\$0	\$974,000	\$1,050,000	\$1,130,000
FCD SaaS Net Revenue	\$0	\$468,000	\$1,170,000	\$2,047,500
CCaaS External Revenue	\$0	\$0	\$180,000	\$360,000
Annual Financial Benefit (B_{net})	\$0	\$1,442,000	\$2,400,000	\$3,537,500
Cumulative Net Cash Flow	(\$275,000)	\$1,167,000	\$3,567,000	\$7,104,500

This financial model underscores that the Elitez Command Center is not just an operational necessity to shield the company from PWM cost escalation, but a highly profitable profit center capable of returning over \$7 million SGD in cumulative net cash flow within 36 months of launch.

Strategy Recommendations and Conclusions

The establishment of the Elitez Integrated Command Center is a strategic initiative that

addresses Singapore's escalating labor costs and evolving regulatory standards.¹ Over 57% of the projected \$650,000 SGD capital investment can be recovered through Singapore's government funding landscape, including the EDG, WDG(JR+), and SNEF CCP programs.⁴ This minimizes upfront financial exposure while creating a highly competitive managed services model.¹

To maximize value creation, Elitez Group should pursue three key priorities:

1. **Immediate Application for Grant Letters of Offer:** The project team must finalize hardware specifications and submit the EDG application through the Business Grants Portal.²⁷ It is critical to avoid signing agreements or paying deposits until the Letter of Offer is received, ensuring grant eligibility.²⁷
2. **Accelerated Integration of Internal Business Units:** Consolidating the operations of all seven business units into the command center will drive immediate cost efficiencies.⁴ Redesigning roles and training personnel under the SNEF CCP and WDG(JR+) pathways will build a more capable, tech-enabled workforce.²⁸
3. **Targeted Market Launch for FCD Manless Security:** Elitez Group should actively market its "Manless Security" packages to FCD operators before the 2030 DTS deadline.⁴ This establishes a strong, high-margin B2B commercial pipeline and positions Elitez Group as a market leader in compliance-driven managed services.⁴
